

Industrial Gearbox

This gearbox is designed for use in machinery and industrial applications. It provides efficient speed and torque conversion, ensuring optimal performance of the connected machinery.

Product Overview

Industrial Gearbox Performance

This industrial gearbox is a robust component engineered for efficient power transmission in mechanical systems. It provides reliable speed and torque conversion, designed to withstand demanding operational conditions while minimizing downtime. With precise gear specifications, it offers a versatile and durable solution for various industrial machinery applications.

Technical Specifications

Speed Reduction Scale	1:5
Wave Wheel Spline Size	9x9x11.5
Inner Gear Modulus	0.9M
Suitable Load Weight	5 KG
