

Industrial Generator Set

This industrial generator set features a large internal combustion engine coupled with an electrical generator. It is mounted on a robust steel frame and used for backup power, peak shaving, or primary power generation in industrial or commercial settings.

Overview

Industrial-Grade Power Generation

This heavy-duty industrial generator set is engineered for reliable, continuous power output in demanding commercial and industrial environments. Featuring a robust multi-cylinder, inline internal combustion engine directly coupled to a high-capacity electrical generator, the unit ensures efficient energy conversion. Built on a vibration-damped steel frame, this system is an ideal solution for backup power, peak shaving, or primary power generation applications.

Technical Specifications

Construction Features

- Direct-coupled generator
- Robust steel frame mounting
- Integrated vibration damping

Engine Configuration

Multi-cylinder, inline

Applications

Primary Applications

Backup Power, Peak Shaving, Primary Power Generation
