

Industrial Globe Valve for Flow Control

This globe valve is designed for industrial applications requiring precise flow control. Its design allows for throttling and regulating flow, making it suitable for various media, including liquids and gases.

Product Overview

Industrial Globe Valve Performance

This robust globe valve is engineered for industrial applications requiring precise flow control and regulation. Designed for durability in demanding environments, it supports both liquid and gas media across diverse sectors such as chemical processing, water treatment, and power generation. Its compact, flanged design ensures secure, leak-proof integration into existing piping systems while providing exceptional throttling and shut-off capabilities.

Technical Specifications

Pressure Rating	10K, 20K
Material Grade	SCS13
Nominal Size	50 mm

Features & Capabilities

Suitable Industries

- Chemical Processing
- Water Treatment
- Power Generation

Compatible Media

Liquids • Gases

Key Performance Metrics

1 Precision

Flow Control

1 Reliable

Shut-off Capability
