

Industrial Grinding Machines

Industrial grinding machines are built with robust construction and powerful motors. They efficiently remove material and finish surfaces and are available in various sizes and configurations.

Overview

High-Performance Industrial Grinding

These industrial grinding machines are engineered with robust construction and powerful motors, designed specifically for efficient material removal and high-quality surface finishing. Built to handle demanding workloads, they provide reliable performance across various industrial applications. With multiple configurations available, these units offer the versatility needed to meet diverse operational requirements in manufacturing and maintenance environments.

Technical Specifications

Available Model Series

- RBG250D
- RBG300D
- RBG400D

Construction Features

Robust Construction • High-Power Motor

Primary Applications

Material Removal, Surface Finishing, Industrial Processing
