

Industrial Hardened Gear with Internal Splines

This precision-engineered gear is designed for demanding industrial applications. It features robust construction with hardened teeth for enhanced durability and wear resistance.

Product Overview

Precision-Engineered Industrial Gear

This industrial hardened gear is meticulously designed for demanding applications requiring high durability and wear resistance. Featuring robust construction and precision-cut internal splines, it ensures a secure, reliable connection within power transmission systems. Built to meet stringent quality standards, this component is engineered to deliver optimal performance and an extended service life in heavy-duty machinery.

Technical Specifications

Quality Compliance

Industrial Grade • Wear Resistant

Construction

Hardened teeth for enhanced durability

Connection Interface

Internal Splines

Suitable Applications

Industrial Machinery, Power Transmission Systems, Heavy-Duty Equipment
