

Industrial Heater and Heat Exchanger Unit

This industrial unit provides both heating and heat exchange capabilities. Its robust stainless steel construction is mounted on casters and includes a control panel for efficient thermal management.

Overview

Industrial Thermal Management Solution

This industrial stainless steel heater and heat exchange unit is engineered for efficient thermal management in demanding industrial environments. Designed with mobility in mind, the unit is mounted on heavy-duty casters, allowing for flexible deployment across various production areas. It features a comprehensive control panel with integrated indicators and gauges, alongside precision valves for accurate fluid regulation, ensuring reliable performance and durability.

Technical Specifications

Mobility

Casters • Portable

Construction Material

Stainless Steel

Control & Operation

Control Interface

- Multiple indicators
- Pressure/Temperature gauges
- Fluid regulation valves
