

Industrial Heavy-Duty Mobile Hoist

This heavy-duty hoist is designed for industrial lifting and material handling applications. It is equipped with a multi-wheel chassis for mobility and stability during operation.

Overview

Industrial Heavy-Duty Mobile Hoist

This heavy-duty hoist machinery is specifically engineered for demanding industrial lifting and material handling applications. Built with a robust steel frame, it features an articulated arm with a rotating head and a centralized control cabin for precise operation. Its multi-wheel chassis ensures both excellent mobility and stability, making it an ideal solution for port operations, construction sites, and large-scale manufacturing environments.

Key Features

Design Highlights

- Robust steel frame construction
- Articulated arm with rotating head
- Centralized control cabin
- Multi-wheel chassis for stability

Suitable Applications

Port Operations, Construction Sites, Large-scale Manufacturing

Performance

Mobility System

Multi-wheel chassis

Operation Control

Centralized cabin control
