

Industrial Hopper for Granular Materials

This industrial hopper is designed for storing and dispensing granular or powdered materials. Its stainless steel construction and conical bottom facilitate material flow.

Overview

Industrial Hopper Solution

This industrial-grade hopper is engineered for the efficient storage and dispensing of granular and powdered materials. Featuring a robust stainless steel construction with a conical bottom design, it ensures smooth flow and reliable performance in demanding plastic processing or industrial environments. The unit comes fully equipped with a supportive metal frame, integrated access ladder, and a side-mounted control box for streamlined operation.

Technical Specifications

| | |
|---------------------------|--------------------------------------------------------------------------------|
| Construction Material | Stainless Steel |
| Hopper Shape | Conical Bottom |
| Application Compatibility | Granular Materials, Powdered Materials, Plastic Processing, Industrial Storage |

Features

Included Components

- Blue metal support frame
- Access ladder
- Side-mounted control box
- Bottom discharge point
