

# Industrial Hot Air Blower for Heating

This industrial hot air blower is engineered for high heating efficiency and rapid temperature increase. It offers long service life and easy installation, using either diesel or coal as a fuel source.

## Product Overview

### Industrial Heating Solution

This industrial hot air blower is engineered to provide efficient and reliable heating for large-scale environments. It is highly suitable for agricultural settings such as vegetable greenhouses, animal houses, and poultry farms, as well as industrial spaces like warehouses and factories. Built for performance, the unit is available in two fuel variants to accommodate different operational needs.

## Technical Specifications

### Safety Features

Flame Sensor • Overheat Protection

Available Fuel Types	Coal, Diesel
Operation Mode	Fully automatic

## Applications

### Suitable Environments

- Vegetable greenhouses
- Animal houses
- Poultry houses
- Warehouses
- Factories
- Workshops
