

Industrial HVLS Fan for Large Spaces

These high-volume, low-speed (HVLS) fans are designed for large industrial spaces. They provide consistent temperature distribution and improved air quality through efficient air circulation.

Product Overview

Industrial HVLS Ventilation Solution

This High Volume Low Speed (HVLS) fan is engineered specifically for large-scale industrial environments like factories and workshops. It provides superior air circulation and natural breeze effects, which significantly enhance worker comfort and productivity. By promoting consistent temperature distribution and air quality, this system helps reduce condensation and lowers overall cooling and heating costs by up to 30%.

Technical Specifications

Power Consumption	1.5 kW
Energy Savings	30 %

Key Benefits

Operational Benefits

- Large space cooling and ventilation
- Natural breeze air flow
- Humidity and moisture control
- Reduced AC operating costs
- Improved worker productivity

Performance Highlights

30 %

Energy Cost Reduction
