

Industrial IGBT Welding Machine

Industrial welding machines are designed for heavy-duty welding applications. These machines are equipped with advanced IGBT technology for efficient and reliable performance.

Product Overview

Industrial-Grade Welding Performance

These industrial welding machines are engineered for demanding, heavy-duty applications requiring high precision and reliability. Utilizing advanced IGBT technology, the equipment ensures efficient power management and consistent arc stability. Built to meet stringent industrial quality standards, they provide a robust solution for professional welding environments.

Technical Specifications

Key Performance Metrics

200 A

Current (Model NB-200)

315 A

Current (Model NB-315)

Core Technology

IGBT

Compliance and Standards

Certifications & Standards

Industrial Standard Compliant, Heavy-Duty Rated

Model Options

Available Models

- NB-200IGBT-T
- NB-315IGBT-T
