

Industrial Impeller Rotor

This industrial impeller rotor features curved blades for efficient air or fluid movement. The central hub allows connection to a motor or drive shaft.

Product Overview

Industrial Performance Impeller

The YWF(K)6D630-GH is a high-performance industrial impeller rotor designed for demanding environments. Featuring an aerodynamic multi-blade design, this rotor optimizes airflow efficiency and fluid dynamics for heavy-duty machinery. Its robust metallic construction ensures long-term durability, providing a reliable connection point for integration into motors or drive shafts.

Technical Details

Model Identifier	YWF(K)6D630-GH
Component Type	Impeller, Rotor, Industrial Component

Material & Build

Durability Profile

Wear-resistant • Industrial Standard

Build Material	Industrial-grade metal
