

Industrial Infrared Heat Lamp with Metallic Base

High-intensity infrared heat lamps designed for industrial heating applications. The lamps are equipped with metallic bases for secure mounting and electrical connection, and are available in various power ratings to suit diverse heating requirements.

Overview

High-Performance Industrial Heating

This industrial infrared heat lamp is engineered for rapid and efficient heat transfer in demanding environments. Featuring a clear quartz glass tube and a robust metallic base, it ensures secure mounting and reliable electrical connectivity. It is a versatile solution designed for precise thermal control in applications such as plastic welding, thermoforming, and paint drying.

Technical Specifications

Heating Element	Resistance heating element
Tube Material	Clear quartz glass
Mounting Base	Metallic base

Applications

Suitable Applications

- Plastic welding
- Thermoforming
- Paint drying
- General industrial heating

Key Features

Key Features	Rapid Heating, Efficient Transfer, Industrial Grade, Secure Mounting
