

Industrial Internal Combustion Engine

This robust internal combustion engine is designed for industrial applications. It features a multi-cylinder configuration with a cooling system, fuel injection, and lubrication system.

Overview

Industrial-Grade Performance

This robust internal combustion engine is engineered specifically for demanding industrial applications, including heavy machinery and power generation. Featuring a durable cast iron block construction, it is built to withstand rigorous operational environments. The unit integrates advanced fuel injection and precision sensor monitoring to ensure consistent performance and reliability.

Technical Specifications

Lubrication

- Oil pump
- Oil filter

Cooling System	Radiator and fan cooling system
Block Material	Cast Iron
Fuel Delivery	Fuel Injection System

Features

Monitoring & Control	Sensors, Actuators, Performance Monitoring
----------------------	--

Applications

Recommended Applications

Heavy Machinery • Power Generation • Industrial Equipment
