

Industrial Internal Combustion Engine

This internal combustion engine is designed for a variety of industrial applications. Its multi-cylinder configuration is optimized for power generation and efficient fuel consumption.

General Overview

Industrial Y485G Engine

The Y485G is a robust and reliable internal combustion engine engineered specifically for demanding industrial environments. Designed with a multi-cylinder configuration, it optimizes the balance between high-performance power generation and fuel efficiency. Built with durable materials, this engine is exceptionally well-suited for integration into electric power generation systems, including transmission and distribution infrastructure.

Technical Specifications

Integrated Systems

- Fuel Injection System
- Oil Filtration System
- Cooling System

Engine Configuration	4-Cylinder
-----------------------------	------------

Applications

Primary Applications	Electric Power Generation, Transmission Systems, Distribution Systems
-----------------------------	---

Construction

Build Characteristics

Heavy-Duty Block • Industrial Grade
