

Industrial Intra-Vane Hydraulic Pump

This high-performance intra-vane pump is designed for demanding industrial applications. Its design ensures smooth and quiet performance, making it suitable for a variety of hydraulic systems.

Overview

Industrial Performance

This high-performance intra-vane pump is engineered for demanding industrial applications requiring reliable hydraulic power. It features a robust construction designed for long-lasting durability and efficient operation in continuous-duty environments. The pump's design focuses on delivering smooth, quiet performance, making it an ideal component for machine tools and plastic injection molding equipment.

Key Features

Performance Highlights

95 %

Volumetric Efficiency

65 dB

Noise Level

Suitable Applications

Machine Tools, Plastic Injection Molding, Industrial Hydraulic Systems

Design & Build

Design Advantages

- Compact footprint for easy system integration
- Robust construction for extended service life
- Optimized vane geometry for quiet operation
