

Industrial Liquid Filtration System

This robust filtration system is designed for demanding industrial use. It utilizes multi-stage filtration with a high-efficiency fine filter to remove contaminants from liquids.

Overview

Industrial Liquid Filtration System

The QHF Series filtration system is a robust and efficient solution engineered for demanding industrial environments. It utilizes a multi-stage filtration process, combining a large-capacity pre-filter with a high-efficiency fine filter to ensure superior removal of particulates and contaminants. Built with corrosion-resistant materials, this system is designed for long-lasting performance in harsh operational conditions.

Key Features

Core Features

- Multi-stage filtration process
- High-efficiency fine filter
- Large-capacity pre-filter
- Built-in pump for consistent flow
- Integrated pressure gauge monitoring
- Easy-access filter elements

Construction

Corrosion-resistant, Industrial-grade

Applications

Suitable Industries

Chemical Processing • Water Treatment • Manufacturing

Performance

Performance Metrics

2 stages
