

Industrial Liquid Ring Vacuum Pump

This industrial pump utilizes a liquid ring to generate vacuum. It is suitable for processes such as chemical processing, food processing, and power generation.

Product Overview

Industrial Liquid Ring Vacuum Pump

This robust liquid ring vacuum pump is engineered for demanding industrial environments. By utilizing a liquid ring, typically water, it effectively generates a consistent vacuum for a wide range of critical processes. The design features a horizontally mounted motor coupled with a durable pump body on a heavy-duty base frame, ensuring long-term reliability in chemical, food, and power generation industries.

Technical Specifications

Technology

Liquid Ring • Water Ring

Model Number

2SK-6B

Application Suitability

Suitable Industries

- Chemical Processing
- Food Processing
- Power Generation
