

Industrial Liquid Sprayer with Dual Nozzles

High-precision spraying machinery designed for efficient and uniform distribution of liquids. The control unit allows for precise adjustment of flow rates and spray patterns, ensuring optimal performance and minimal waste.

Product Overview

Industrial Precision Spraying

This high-precision industrial liquid sprayer is engineered for efficient and uniform liquid distribution across diverse environments. Designed for professional use, it features dual output nozzles and a robust, intuitive control unit for granular management of flow rates. Its durable construction ensures reliability in demanding agricultural, manufacturing, and construction applications, effectively minimizing waste while maximizing operational performance.

Technical Specifications

Control Unit Capabilities

- Precise flow rate adjustment
- Customizable spray patterns
- Waste minimization technology

Efficiency Metrics

2 count

Output Nozzles

Nozzle System

Dual Output Nozzle System

Industry Applications

Agricultural, Manufacturing, Construction
