

Industrial Machinery Air Suspension System

Air suspension systems are designed for industrial machinery requiring vibration isolation. They provide load support using a shock absorber, air spring, and pneumatic lines attached to a mounting bracket.

Product Overview

Industrial Air Suspension System

This heavy-duty air suspension system is engineered specifically for industrial machinery, providing superior vibration isolation and robust load support. The assembly features a durable black mounting bracket, a high-performance shock absorber, and efficient pneumatic lines. Ideal for demanding industrial environments, this system enhances equipment stability and operational longevity.

Technical Specifications

Load Capacity

11 T

Rated Load

Included Components

- Mounting Bracket
- Shock Absorber
- Pneumatic Lines
- Air Spring

Suspension Type

Leaf Spring Air Suspension

Application Suitability

Vibration Isolation, Load Support, Heavy-Duty Machinery
