

Industrial Magnetic Separator

This magnetic separator is engineered for the efficient removal of ferrous contaminants. Its robust design ensures reliable operation across recycling, mining, and various processing industries.

Overview

High-Performance Magnetic Separation

This industrial magnetic separator is engineered for the efficient removal of ferrous contaminants from various material streams. Designed for continuous operation in demanding environments like mining, recycling, and processing, it utilizes a powerful magnetic field to ensure high product purity and protect downstream machinery. Its robust construction makes it a reliable solution for heavy-duty industrial applications.

Technical Specifications

Model Dimensions

2000 mm

Length

1500 mm

Width

Operational Features

- Continuous operation capability
- Robust industrial construction
- Ferrous contaminant removal
- Protects downstream equipment

Applications

Suitable Industries

Recycling, Mining, Processing
