Overview

Industrial Maize & Wheat Processing Solution

This complete industrial milling system is engineered for high-volume processing of maize and wheat into various grades of flour. The turnkey solution integrates cleaning, grinding, and sifting stages to ensure consistent output quality and high throughput. Designed for durability and scalability, it is suitable for medium to large-scale production facilities requiring reliable, automated machinery.

Technical Capabilities

Key System Features

- Complete turnkey processing line
- Automated milling and sifting stages
- Advanced control system for parameter adjustment
- Modular design for scalability
- Integrated cleaning and conveying components

Supported Products	Maize Flour, Wheat Flour, Nshima Flour, Injera Flour, Ugali Flour, Maize Grits
Model Designation	6FYDT-10

Service & Support

Warranty & Service

- One-year quality guarantee
- One-year free spare parts
- Lifelong technical service
- Installation and commissioning support
- Worker training provided
