

# Industrial Material Separator

This industrial separator employs German Humboldt technology for material separation. It features a robust steel frame, top-mounted motor and gearbox, and multiple access ports for monitoring.

## Overview

### Industrial Material Separator

The O-SEPA industrial material separator utilizes advanced separation technology to provide high-efficiency material processing. Its robust design features a top-mounted motor and gearbox assembly, ensuring reliable performance in demanding industrial environments. The unit is engineered with a cylindrical upper body and a conical lower section, optimizing flow and discharge, while integrated access ports and inspection windows facilitate easy maintenance and operational monitoring.

## Technical Features

### Construction Components

- Robust steel support frame
- Cylindrical separation chamber
- Maintenance access ports

### Key Design Features

Top-mounted motor, Gearbox assembly, Steel frame, Conical discharge, Inspection windows
