

# Industrial Mesh Screen for Textile Machinery

This industrial mesh screen is used in apparel and textile machinery. The screen is constructed of a woven material forming a grid pattern with circular openings and is designed for filtration, separation, or support within textile manufacturing processes.

## Product Overview

### Industrial Mesh Screen for Textile Machinery

This industrial-grade mesh screen is engineered specifically for use in apparel and textile manufacturing environments. Featuring a precise woven grid pattern with circular openings, it provides reliable performance for filtration, material separation, and component support. Its robust construction ensures durability and efficiency in demanding textile processing applications.

## Technical Specifications

### Industry Suitability

Apparel • Textile Machinery

### Construction

Woven Mesh

### Opening Shape

Circular

### Primary Applications

Filtration, Material Separation, Machinery Support, Textile Manufacturing
