

Industrial Metal Forming Compressor

This heavy-duty industrial compressor is designed for metal forming applications, such as rolling mill operations. It features a robust frame, a powerful motor, and precise control mechanisms for efficient metal processing.

Overview

Industrial Metal Forming Compressor

This heavy-duty industrial compressor is engineered specifically for demanding metal forming applications, such as rolling mill operations. Built with a robust frame and a powerful motor, it ensures consistent performance in high-pressure industrial environments. The unit integrates precise control mechanisms and comprehensive safety features to deliver efficient, accurate, and reliable metal processing.

Technical Specifications

| | |
|-------------------|----------|
| Model Designation | JZ21-200 |
| Series Identifier | ZDM |

Key Features

Construction

Robust Frame • Durable Construction • High-Performance

Application Focus

Metal Forming, Rolling Mill Operations, Industrial Processing

Control & Safety

| | |
|-----------------|-----|
| Control System | Yes |
| Safety Features | Yes |
