

# Industrial Metal Forming Mould

This metal forming mould is designed for industrial applications. It features multiple circular and rectangular cutouts for creating components with specific dimensions.

## Product Overview

### Industrial Metal Forming Mould

This industrial metal forming mould is engineered for precision manufacturing processes. Constructed from durable, reflective metal, the unit features a textured surface and is designed with six circular apertures and one rectangular slot for consistent component creation. Its robust build makes it suitable for demanding industrial applications.

## Physical Characteristics

### Aperture Configuration

- 6 Circular apertures
- 1 Rectangular slot

### Condition

Used • Industrial Grade

### Material Finish

Reflective metal with textured surface
