

Industrial Metal Pipes for Fluid and Gas Transport

These heavy-duty metal pipes are designed for transporting fluids or gases. They are arranged in parallel rows and suitable for chemical processing or manufacturing facilities.

Product Overview

Industrial-Grade Fluid and Gas Transport

These heavy-duty metal pipes are engineered for demanding industrial environments, specifically tailored for the reliable transport of fluids and gases under pressure. Designed for scalability and durability, they are suitable for chemical processing plants, manufacturing facilities, and critical infrastructure projects. Their robust construction ensures long-term performance in high-stakes operational settings.

Technical Specifications

Compliance

Industrial Standard • Pressure Rated

Primary Application

Chemical Processing, Fluid Transport, Gas Transport, Industrial Manufacturing

Construction

Heavy-duty industrial grade

Installation

Parallel row configuration
