

Industrial Metal Pipes

These cylindrical metal pipes are designed for industrial or construction applications. The uniform pipes are arranged in multiple layers, making them suitable for large-scale projects.

Product Overview

Industrial Grade Metal Piping

These industrial metal pipes are engineered for demanding construction and infrastructure applications. Featuring a uniform, cylindrical design, they are optimized for bulk storage and large-scale project deployment. Their robust construction ensures consistent performance and durability in heavy-duty environments.

Technical Specifications

Material Type	Industrial Steel
Markings	UTK, 300

Logistics and Packaging

Packaging Format	Strapped bundles
Configuration	Multi-layer stacked
