

Industrial Metal Shearing and Bending Machine

This heavy-duty machine is engineered for precision shearing and bending of metal sheets. It features a robust build and advanced control systems for accurate and efficient operation.

Overview

Industrial Metal Forming Solution

This heavy-duty machine is engineered for precision shearing and bending of metal sheets, featuring a robust build and advanced control systems for accurate and efficient operation. Designed for high-volume manufacturing environments, it delivers consistent performance for complex metal fabrication tasks. Its integrated control systems ensure reliable output, making it an essential asset for industrial production lines requiring high-precision metal forming.

Technical Specifications

Bending Force

160 Tons

Rated Force

Model Number	WC67K-160/4100
--------------	----------------

Bending Length	4100 mm
----------------	---------

Capabilities

Application Suitability

- High-volume manufacturing
- Industrial metal fabrication
- Precision sheet metal processing

Primary Functions	Shearing, Bending, Folding, Metal Forming
-------------------	---
