

Industrial Metalworking Machine

This industrial machine is designed for various metalworking applications. Its robust construction and automated controls ensure precision and efficiency in manufacturing environments.

Overview

Industrial Metalworking Solution

This large-scale industrial machine tool is engineered for heavy-duty manufacturing and precision metalworking. Featuring a robust, horizontal structure equipped with multiple hydraulic or pneumatic cylinders, it is designed for demanding industrial environments. The unit includes a sophisticated control panel for automated or semi-automated operation, ensuring consistent performance and operational efficiency.

Technical Specifications

Key Design Features

- Linear motion rails
- Multi-cylinder configuration
- Integrated control panel

Equipment Color

Blue

Operation Mode

Automated / Semi-automated

Drive System

Hydraulic, Pneumatic
