

Industrial Metalworking Machine Tool

This machine tool is a robust and precise piece of equipment designed for industrial manufacturing processes. It is constructed with heavy-duty metal components and integrated safety enclosures, making it suitable for high-volume production environments requiring accuracy and repeatability.

Product Overview

Industrial Metalworking Precision

This robust industrial machine tool is engineered for high-volume manufacturing environments where accuracy and repeatability are paramount. Featuring a sophisticated control panel with digital displays and integrated safety enclosures, it ensures both operational precision and operator protection. Its heavy-duty metal construction and solid base with leveling feet provide the stability required for demanding industrial processes.

Technical Specifications

Key Features

- Digital control panel
- Automated material feeding system
- Integrated safety enclosures
- Heavy-duty metal construction
- Adjustable leveling feet

Application Suitability

High-volume production • Industrial manufacturing • Precision metalworking

Model Identifiers

BL 120 HS, C 430
