

Industrial Mineral Cleaning Machine

This industrial cleaning machine is designed for mineral processing applications. It features a stainless steel construction with integrated piping and control systems for efficient cleaning.

Overview

Industrial Mineral Cleaning Efficiency

This industrial cleaning machine is engineered specifically for the rigorous demands of mineral processing environments. Featuring a robust stainless steel construction, it ensures durability and resistance to harsh operational conditions. The system incorporates an integrated piping and control setup, utilizing a large cylindrical drum design to facilitate thorough and efficient cleaning of mineral samples.

Technical Specifications

Operational Access

- Sturdy base mount
- Multiple access ports

Model Identifier	TZ50
Construction Material	Stainless Steel
Design Features	Cylindrical Drum, Integrated Piping, Integrated Control System, Secure Locking Mechanism
