

Industrial Mist Eliminator

These systems efficiently separate liquids from gas. They are suitable for applications needing clean and efficient operation.

Product Overview

Industrial Mist Eliminator System

This industrial mist eliminator system is expertly engineered to efficiently remove liquid droplets from gas streams. Designed to balance high-efficiency separation with minimal pressure drop, it ensures clean and reliable operation across demanding environments. Its robust, corrosion-resistant construction makes it a versatile solution for applications ranging from power generation to chemical processing and air pollution control.

Key Features

Operational Advantages

- High efficiency liquid-gas separation
- Low pressure drop design
- Corrosion-resistant materials
- Customizable configuration options

Application Areas

Suitable Industries

Power Generation, Chemical Processing, Air Pollution Control
