

Industrial Motor for Plastic Injection Molding

This industrial motor is designed for plastic injection molding machines. It features a durable construction with a finned housing for efficient heat dissipation and a flange mount for secure installation.

Overview

Industrial Performance for Injection Molding

The SZY series industrial motor is a robust solution engineered specifically for high-demand applications like plastic injection molding. Featuring a durable finned housing design, the motor ensures efficient thermal management to maintain consistent power output under rigorous conditions. Its high-strength steel shaft and secure flange mounting system provide the reliability and stability required for heavy-duty industrial machinery.

Technical Specifications

Primary Applications

- Plastic injection molding
- Demanding industrial environments
- High-torque machinery

Design Features

Finned housing, Flange mount, High-strength steel shaft

Cooling System

Yes
