

Industrial Multi-Port Valve

This industrial valve features a cylindrical body with multiple parallel outlet pipes. It is designed for controlling fluid or gas flow in heavy-duty industrial applications.

Product Overview

Industrial Multi-Port Valve

This heavy-duty industrial multi-port valve is engineered for precise control of fluid and gas flow in demanding environments. Featuring a robust cylindrical body and multiple parallel outlet pipes, it is designed for complex piping systems requiring reliable distribution. The unit includes a protective green exterior and a specialized red interior lining to withstand harsh operational conditions.

Design and Construction

Body Configuration	Cylindrical with multiple parallel outlet ports
Finish and Lining	Green Exterior, Red Interior Lining

Installation

Mounting	Integrated support structure mount
----------	------------------------------------

Application

Primary Use

Fluid Control • Gas Flow Management • Industrial Piping
