

Industrial Oil Water Separator

This industrial equipment is engineered for the separation of oil and water mixtures. It is designed for large-scale applications, ensuring effective removal of oil contaminants from water streams.

Product Overview

Industrial Oil-Water Separation System

This high-efficiency industrial equipment is designed for the effective separation of oil and water mixtures in large-scale applications. Engineered for continuous operation, the system utilizes a multi-stage process involving interconnected tanks, pumps, and control valves to ensure reliable removal of oil contaminants from water streams. It is an ideal solution for demanding environments such as manufacturing, oil refining, and wastewater treatment facilities.

Technical Specifications

Key Components

- Separation tanks
- Pumping systems
- Control valves
- Interconnected piping

Maintenance Level

Minimal Maintenance • Continuous Operation

Applications

Suitable Industries

Manufacturing, Oil Refining, Wastewater Treatment
