

Industrial Ozone Generator for Air and Water Treatment

This industrial ozone generator is designed for air and water treatment. It features a self-contained unit with a control panel and associated plumbing.

Overview

Industrial Ozone Treatment System

This high-capacity industrial ozone generator is engineered for demanding air and water treatment applications. Designed as a robust, self-contained unit, it provides consistent ozone output suitable for large-scale purification requirements. The system features an integrated control interface for precise operation in professional industrial environments.

Technical Specifications

Ozone Output Capacity

10 kg/h

Ozone Production

Category	Large Ozone Generator
Model Number	100021

Compliance and Standards

Primary Applications	Water Treatment, Air Purification, Industrial Processing
