

Industrial Ozone Generator System for Air and Water Purification

Industrial ozone generator system designed for water treatment and air purification applications. The system includes multiple modular units housed in cabinets, with stainless steel piping and a cylindrical vessel.

Overview

Industrial Ozone Generator System

This industrial-grade ozone generator system is engineered for high-capacity air and water purification tasks. Utilizing a modular 4-unit configuration, it offers robust performance for large-scale treatment applications. The system is designed for durability and efficiency in demanding industrial environments.

Technical Specifications

Total Ozone Output

120 kg

Total Capacity

Product Category

Large Ozone Generator • Industrial Purification

System Configuration

4 x 30kg modular units

Identification

Product Number

100039
