

Industrial Paper Processing Machinery

This industrial machinery is designed for paper processing. It features a long structure with multiple screens for material separation and collection funnels.

Overview

High-Efficiency Paper Processing

This industrial paper production machinery is engineered for continuous, high-volume material processing. Featuring a robust, vibration-damped structure, it excels in material separation and refinement. Its integrated filtration and collection systems ensure operational efficiency and consistent output quality in demanding production environments.

Technical Specifications

Structure Type	Long rectangular continuous processing unit
Vibration Damping	Yes
Filtration System	Integrated fabric filters, Collection funnels

Construction

Key Components

- Multiple screen sections
- Material separation modules
- Vibration damping spring mechanisms

Frame Design	Robust frame with cylindrical support legs
