

Industrial Part Cleaning Machine with Conveyor System

This industrial cleaning machine is designed for heavy-duty applications. It utilizes an overhead conveyor system for part handling and a blast chamber with multiple turbine blast wheels for efficient cleaning.

Overview

Industrial Cleaning Solution

This industrial cleaning machine is engineered for heavy-duty applications requiring high-efficiency surface treatment. It features an integrated overhead conveyor system for streamlined part handling and a blast chamber equipped with multiple turbine blast wheels. Built with robust materials, this system ensures durability and consistent performance in demanding industrial environments.

Technical Specifications

Material Handling	Overhead Conveyor System
Cleaning Method	Turbine Blast Cleaning
Blast Configuration	Multiple Turbine Blast Wheels

Operational Features

Construction Quality

Heavy-Duty • Industrial Grade • High Durability

Control System	Integrated Operation and Monitoring Panel
