

Industrial Parts Cleaning Machine with Rotating Drum

This industrial cleaning machine features a rotating drum for thorough cleaning of parts. It is also equipped with a dust collection system to maintain a cleaner working environment.

Overview

Heavy-Duty Industrial Cleaning Solution

This industrial cleaning machine is engineered for rigorous manufacturing environments, utilizing a high-efficiency rotating drum mechanism to ensure thorough cleaning of various components. Designed to improve workplace safety and cleanliness, the unit features an integrated dust collection system that effectively captures debris during operation. With its intuitive control panel, operators can easily monitor and adjust cleaning parameters, making it a reliable asset for maintaining high standards in industrial parts processing.

Technical Specifications

Suitable Applications

- Manufacturing components
- Industrial parts cleaning
- Heavy-duty industrial settings

Cleaning Mechanism	Rotating Drum
Key Features	Rotating Drum, Dust Collection System, Integrated Control Panel, Heavy-Duty Construction

Operational Controls

Safety Standards

Dust Collection Equipped

Operation Type	Manual control panel
