

Industrial Pipe Manufacturing Machine

This industrial machine is designed for manufacturing and processing pipes. It features a hopper for material input, an extrusion section, and a control panel.

Overview

Industrial Pipe Manufacturing Solution

This industrial-grade machinery is engineered for the efficient manufacturing and processing of plastic pipes. Designed for heavy-duty industrial applications, the unit features an integrated material hopper, a high-performance extrusion section, and a centralized control panel for precise operational management. It is a robust solution suitable for high-volume pipe production environments.

Technical Specifications

Machine Type	T-Type Plastic Pipe Machine
