

Industrial Plasma Cutting and Bending Machine

This heavy-duty plasma cutting machine is designed for industrial metalworking applications. It is a versatile tool for metal forming and fabrication.

Overview

Industrial-Grade Metalworking Solution

This heavy-duty plasma cutting and bending machine is engineered for demanding industrial metalworking applications. Featuring advanced IGBT inverter technology, it ensures efficient and precise power conversion for consistent performance. The robust design, complete with integrated cooling systems and intuitive digital controls, makes it a versatile tool for professional fabrication and metal forming tasks.

Technical Specifications

Technology	IGBT Inverter
Model Series	LGK 100
Key Features	Plasma Cutting, Fold Bending, Digital Display, Heavy-Duty Construction
Cooling System	Yes
