

Industrial Pressure Control Component

This industrial component is designed for pressure control in machinery applications. It features a durable enclosure, integrated cable gland, and a brass fitting with a threaded male connector.

Product Overview

Industrial Pressure Control Component

This industrial pressure control component is engineered for reliable performance in demanding machinery applications. It features a robust enclosure design with integrated cable management, ensuring secure electrical connections in harsh environments. With versatile starting pressure options and high-temperature tolerance, it provides precise control for various industrial fluid and gas systems.

Electrical Specifications

Maximum Current

15 A

Max Current

Rated Voltage 220V

Rated Frequency 50 Hz

Operational Limits

Available Starting Pressures

- 8
- 15
- 25
- 45

Maximum Working Pressure 45 bar

Maximum Working Temperature 90 °C
