

Industrial Pressure Vessel

This cylindrical pressure vessel is designed for industrial applications requiring fluid or gas storage and processing. It features multiple nozzles and flanges for connections to piping systems and is constructed of steel with a protective coating.

Overview

Industrial Pressure Vessel

This industrial-grade pressure vessel is engineered for the safe storage and processing of gases and fluids in demanding industrial environments. Constructed from high-quality steel with a protective coating, it features a horizontal orientation with elliptical heads for optimal structural integrity. Designed with multiple nozzles and flanges, it offers versatile connectivity for seamless integration into chemical processing, oil, and gas piping systems.

Technical Specifications

Orientation	Horizontal
Material	Steel
Head Design	Elliptical
Primary Applications	Chemical Processing, Oil and Gas, Fluid Storage, Gas Processing

Key Features

Connectivity

- Multiple nozzle ports
- Flanged connections
- Integrated piping interface

Design Highlights

Protective Coating • Reinforced Base • Industrial Grade
