

Industrial Process Valve

This industrial valve is designed for regulating the flow of liquids and gases in various processes. It provides reliable control and contributes to the efficiency of industrial operations.

Overview

Industrial Process Valve

This industrial process valve is engineered for high-performance applications in demanding environments. Designed to provide precise flow control and long-term reliability, it integrates seamlessly into complex piping systems. Its robust construction ensures consistent operation across a wide range of industrial processes, making it an essential component for facility infrastructure.

Performance Metrics

Flow Capacity

500 m³/h
Flow Rate

Pressure Rating

16 bar

Technical Specifications

Connection Standards

- Flanged (ANSI B16.5)
- Threaded (NPT)
- Welded

Materials

Stainless Steel, Carbon Steel, PTFE Seals

Certifications

Compliance

ISO 9001 • CE Certified • API 6D
