

Industrial Pump End for Fluid Transfer

This pump end is designed for fluid transfer and circulation. It features robust construction for durability and compatibility with standard fittings.

Overview

Industrial Fluid Transfer Solution

This industrial pump end is engineered for consistent fluid transfer and circulation across a variety of general machinery applications. Featuring a robust construction, it offers high durability and reliability for demanding operational environments. It is designed for seamless integration into both new system builds and existing machinery, prioritizing ease of maintenance for the end user.

Key Performance Metrics

Operational Performance

50 ZBM

Series Model

Design and Compatibility

Intended Use

- Fluid transfer
- Fluid circulation
- General industrial machinery
- System integration

Primary Features

Robust Construction, Efficient Pumping, Standard Fittings Compatible, Low Maintenance
