

Industrial Radiator Assembly

This radiator assembly is designed for efficient heat transfer in industrial applications. It features a durable construction with closely spaced fins and a robust frame.

Product Overview

Industrial Radiator Assembly

This industrial radiator assembly is engineered for heavy-duty diesel engine applications requiring reliable thermal management. Featuring a robust construction with a dense fin core, it ensures efficient heat dissipation even under demanding operational conditions. The assembly is built to withstand rigorous industrial environments, providing a dependable solution for cooling systems in large-scale machinery.

Technical Specifications

Key Features

- Heavy-duty black reinforced frame
- High-density fin core for efficient heat transfer
- Integrated coolant overflow and venting system
- Bolt-secured structural assembly

Primary Application

Diesel Engine, Heavy Machinery, Industrial
