

Industrial Refrigeration Unit

This refrigeration unit is designed for industrial cooling applications. It features a robust construction with ventilated panels for efficient heat dissipation and reliable performance.

ADDITIONAL IMAGES

General Overview

Industrial Refrigeration Excellence

This industrial refrigeration unit is a high-performance system engineered for demanding commercial and industrial environments. Featuring dual reciprocating compressors mounted on a heavy-duty steel frame, it ensures reliability and consistent cooling. The integrated design includes essential components like oil separators and accumulators for efficient, long-term operation.

Suitable Applications

Commercial Refrigeration, Industrial Cooling, Air Conditioning

Technical Specifications

Performance Features

- Dual reciprocating compressors
- Heavy-duty steel frame construction
- Integrated oil separators
- Suction accumulators
- Ventilated panels for heat dissipation

Maintenance

- Service valves for easy refrigerant handling
- Accessible digital control panel
- Robust enclosed electrical components
