Overview

Industrial Maize Milling Solution

This industrial roller mill system is engineered for high-throughput maize and wheat flour production. The complete set includes advanced grinding, sifting, and pneumatic conveying components designed for consistent particle size and high extraction rates. Built for reliability in large-scale processing facilities, this equipment supports automated production lines and offers long-term durability for demanding milling applications.

Technical Capabilities

Core System Components

- Precision Roller Mills
- Pneumatic Conveying System
- Sifting and Separation Units
- Automated Milling Controls

Suitable Applications

Maize Flour, Wheat Flour, NShima Processing, Injera Flour, Ugali Production

Service & Support

Quality Guarantee

1 Year

Warranty Period

Included Services

- Turnkey Project Design
- On-site Installation
- Commissioning Support
- Worker Training
- Lifelong Technical Service
